Customizable	• Aeronix offers an extensive line of Engineering Services including the creation and implementation of custom configurations for the AB12 Packaging, Connectors, Number of Channels, and/or other customer unique requirements.

The Aeronix Gigabit Ethernet Switch AB12 provides twelve Tri-speed Ethernet ports for use in commercial, industrial, and military applications that require ultra-high data transfer rates in a self contained ruggedized package. The rugged design requires no forced air or conductive cooling, allowing operation in a broad range of harsh environments including operation in uninhabited aircraft bays.

The AB12 design is based on the widely-fielded Aeronix GES Gen2 product but adds a more powerful processor with more efficient quad PHY's, enabling a lower maximum power consumption but with a more extensive Layer 2 management capability. Additional functions like STP/RSTP prevent packet looping, and provides more efficient communication using cheapest cost routes and automatic recovery in case of link failure. Other features like IGMP Snooping conserve bandwidth on ports where multicast is not needed.

Each of the twelve IEEE 802.3ab ports can individually auto-detect data rates of 10, 100, or 1000 BASE-T, or can be managed externally.

The AB12 is a fully managed Layer 2 switch with the capability of customer specific configurations. The management functions are stored in non-volatile memory for fixed configurations, or loaded at startup for application specific requirements.

Incorporating the Aeronix AB12 into your design allows the use of high speed connectivity between any or all of your devices while virtually eliminating data-rate bottlenecks.
